ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1917-18.

I.—GENERAL.

A.—DETAILS OF DIRECT EXPENDITURE.

In the year 1917-18 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 74 lákhs compared with Rs. 68½ lákhs in the previous year, and Rs. 84 lákhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows :—

	Deccan and Gujarát.	Sind.	Total.
	Rs.	Rs.	Rs.
Works ...	21,84,044	5,26,226	27,10,270
Repairs ...	4,81,133	22,77,279	27,58,412
Establishment ...	8,52,836	8,83,538	17,36,374
Tools and Plant ...	62,745	31,389	94,134
Refunds of Revenue ...	2,087	338	2,425
Gratuitous Relief ...	.....	.....	.....
Suspense Account ...	1,03,720	4,327	1,08,047
Receipts on Capital Accounts ...	—4,404	.....	—4,404
Total ...	36,82,161	37,23,097	74,05,258

2. The distribution of the above expenditure under Major heads of Accounts is given below :—

Heads.	Rs.	Amount. Rs.	Remarks.
Capital Account—			
Major Works—			
Protective Works	(a) 26,20,567		
Productive Works	73,636		
		26,94,203	Imperial.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept ...	.....	57,788	Half Imperial and half Provincial.
Revenue Account—			
Major Works—			
Protective Works	3,05,626		
Productive Works	14,83,748		
		17,89,374	Do.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept ...	5,15,841		
Works for which only Revenue Accounts are kept ...	9,89,343		
		15,05,184	Do.
Works for which neither Capital nor Revenue Accounts are kept—			
Agricultural Works	12,69,621		Do.
Contribution Works	47,992		Deposit contribution.
		13,17,613	
Construction of Protective Works	.....	41,096	Imperial.
Famine Relief outlay on Irrigation Works	.....	.....	
	Grand Total ...	74,05,258	

(a) Includes expenditure in England, Rs. 22,327.

B.—FIGURES FOR CAPITAL WORKS ONLY.

3. The receipts on Capital Irrigation Works alone compared with the year's expenditure show a profit of Rs. 30,21,506 in Sind and a loss of Rs. 18,21,942 in the Deccan and Gujarát :—

Class of works.		Direct Receipts.	Indirect Receipts.	Total Direct and Indirect Receipts.	Direct expenditure.		
					Capital.	Working expenses (including the share of collection charges.)	Total.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation works	Deccan and Gujarát.	13,62,980	4,064	13,67,044	26,15,793	6,26,962	32,42,755
	Sind	2,26,201	28,68,444	30,94,645	73,636	13,63,688	14,37,324
Minor Irrigation works for which Capital and Revenue Accounts are kept.	Deccan and Gujarát	1,73,249	4,625	1,77,874	6,468	1,17,637	1,24,105
	Sind	79,475	18,59,160	19,38,635	56,094	5,18,356	5,74,450
Total Deccan and Gujárat ...		15,36,229	8,689	15,44,918	26,22,261	7,44,599	33,66,860
Total Sind ...		3,05,676	47,27,604	50,33,280	1,29,730	18,82,044	20,11,774
Grand Total, Deccan and Gujarát and Sind, 1917-18		18,41,905	47,36,293	65,78,198	27,51,991	26,26,643	53,78,634
Grand Total, average of last three years ...		19,13,089	49,26,711	68,39,800	39,44,302	24,60,436	64,04,738

4. The area under irrigation showed, on the whole, a decrease of over 3 per cent. on the average of last triennium. These areas and estimated value of the crops grown are contrasted in the following statement :—

Capital Works.	Area.			Value.		
	1917-18.	Average of 3 years ending 1916-17.	Difference.	1917-18.	Average of 3 years ending 1916-17.	Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Major Works—						
Deccan and Gujarát ...	113,661	110,176	+3,485	1,73,14,031	1,33,03,989	+40,10,042

C.—FIGURES FOR OTHER THAN CAPITAL WORKS.

5. These may be works for which only Revenue Accounts are kept, or works for which neither Capital nor Revenue Accounts are kept. The former are termed Second Class Irrigation Works in the Presidency (excluding Sind). The receipts on these works are principally in the form of a share of the Land Revenue and are termed "Indirect" and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the Statistical Statements accompanying the Irrigation Administration Report, are very small, being for direct revenue only, *viz.*, proceeds from sale of water, etc. The area of irrigation on these very numerous works is always large, but it fluctuates to

some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures :—

Class of works.	Revenue.			Expenditure.	Net Revenue.
	Direct.	Indirect.	Total.		
MINOR WORKS.	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which only Revenue Accounts are kept. Deccan and Gujarát.	18,725	5,91,151	6,09,876	3,10,081	2,99,795
Works for which only Revenue Accounts are kept. Sind	79,939	23,36,765	24,16,704	8,77,761	15,38,943
Total for 1917-18 ...	98,664	29,27,916	30,26,580	11,87,842	18,38,738
Average total for triennium ending 1916-17 ...	74,716	32,30,752	33,05,468	13,82,749	19,22,719
Works for which neither Capital nor Revenue Accounts are kept. Deccan and Gujarát.	13,195	.....	13,195	58,363	-45,168
Works for which neither Capital nor Revenue Accounts are kept. Sind	18,889	9,51,762	9,70,651	12,98,834	-3,28,183
Total for 1917-18 ...	32,084	9,51,762	9,83,846	13,57,197	-3,73,351
Average total for triennium ending 1916-17 ...	27,779	9,57,848	9,85,627	11,74,106	-1,88,479
Grand Total for 1917-18 ...	1,30,748	38,79,678	40,10,426	25,45,039	14,65,387

NOTE.—In this report whenever the average is referred to, it is the average of the last three years, unless otherwise defined.

Class of works.	Area.			Value of crops.		
	1917-18.	Average of the triennium ending 1916-17.	Difference.	1917-18.	Average of the triennium ending 1916-17.	Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Minor Works— Works for which only Revenue Accounts are kept—						
Deccan and Gujarát ...	153,997	142,213	+11,784	48,02,757	41,28,276	+6,74,481

D.—REVIEW OF IRRIGATION.

Description of irrigation.

6. The different conditions obtaining in Sind and in the Presidency proper are brought out strikingly in a general review of irrigation. Well irrigation is similar in the whole of the Presidency, but canal irrigation in Sind is entirely different from the canal and tank irrigation in the Deccan and Gujarat.

7. Owing to the scanty and precarious character of the rainfall in Sind, cultivation entirely depends upon irrigation. The country is for the most part flat and the soil is mostly very fertile, but until it is brought under irrigation, the land presents everywhere the appearance of a desert.

8. The river Indus is the main source of water supply of the canals in Sind. With a few exceptions, all the canals receive water, from June to September only during the inundation of the Indus, and their flow is very variable. They can get only very little water with a low river, while a fairly high and long-lasting inundation permits of the wide-spread cultivation of valuable crops.

9. In the Deccan and Gujarat, the cultivation depends upon rainfall. The tanks and canals are therefore useful for the purpose of growing more valuable crops and to counteract the evil effect of years of drought. The larger irrigation schemes in this part of the Presidency involve the construction of costly storage reservoirs.

Inundation and rainfall in Sind.

10. The inundation of 1917 was remarkable for the low river level in July, its good and steady level in August and its abnormal height during September. The season's rainfall was abnormal and did a great deal of damage to cultivation particularly in the Ghar and Western Nara Districts and in the Jamrao area. Owing to the very late rise of the river and to untimely rains, the season was a poor one except for rabi cultivation on high lands.

Rainfall in the Deccan and Gujarat.

11. In the Deccan, the rainfall was timely and seasonable in most of the districts and the agricultural conditions were fair. In Gujarat, the monsoon broke early in May and lasted until the end of October; consequently there was not much demand for canal water.

Area irrigated and gross revenue.

12. The area irrigated in Sind during the year under review was over $3\frac{1}{2}$ millions acres or more than one-fourth of the total culturable area of the province. The gross revenue was 84 lákhs of rupees. The figures for the previous triennium are $3\frac{3}{3}$ million acres and 89 lákhs of rupees respectively.

13. The total area irrigated in the Deccan and Gujarat was 3,04,623 acres only out of nearly 29 million acres classed as culturable. The revenue from all sources was nearly Rs. 22 lákhs as against Rs. $22\frac{1}{4}$ lákhs, the average of the previous 3 years.

II.—SIND.

1.—NATURE OF INUNDATION AND RAINFALL.

Character of Inundation.

14. The inundation of 1917 was remarkable for the lowness of the river throughout the month of July, its good and steady level throughout August, and its abnormal height throughout the whole of September.

15. The river commenced to rise early in June but did not reach the "fair irrigating level" of 13 feet on Bukkur gauge till the 9th of August 1917. It continued above this level for 30 days as compared with 9 days in 1916, none in 1915 and 18 days, the average of the previous triennium.

16. The "fair irrigating level" (17 feet on the Kotri gauge) was first registered on the 1st August 1917. The river remained above this level for 73 days as compared with 86 in 1916, 65 in 1915 and 84 days, the average of the previous three years.

17. The highest readings for the year were 15·8 feet on the Bukkur gauge on the 16th August and 23·0 feet on the Kotri gauge on the 6th September as compared with 13·6 and 22·1 on the Bukkur and Kotri gauges respectively in 1916, the recorded maximum readings on these two gauges being 17·9 feet and 23·8 feet respectively.

Rainfall.

18. The rainfall during the season was abnormal throughout Sind and did a great deal of damage to cultivation and property. Owing to the very late rise of the river and to abnormal rainfall, the season was a very bad one for dry crop cultivation.

19. As regards rice, the seedlings withered in July and had to be resown in many places and a good deal of the rice cultivation in low lands was flooded.

20. The season was a poor one except for rabi cultivation on high lands.

2.—INDUS RIGHT BANK DIVISION.

(i)—WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

Desert Canal.

21. The canal was opened on 1st June as usual and ceased to flow on 25th November 1917. During practically all June water had to be cut off at the head regulator. But in July rotations had to be enforced at different regulators. From the 29th July till the end of the season the water was always more than required. The full supply gauge reading of 10 feet was obtained on 35 days, but the maximum that could be let into canal was 9·5 feet. Full supply of 2,750 cusecs was obtained on 61 days.

22. The Adiowah gave a good supply from the beginning of August onwards. Full supply was obtained for 16 days and the canal flowed for 73 days. The scheme for remodelling this canal has been sanctioned and the work is in progress.

Unharwah.

23. The canal was opened on 1st June 1917. After the first few days the water supply became deficient with the result that rotations had to be enforced which gave water only for about 5 days out of every 12. From the end of July upto the close of the season the supply was more than sufficient. The canal finally stopped flowing on 19th October 1917. Full supply level of 10 feet was obtained or obtainable on 32 days and the designed discharge of 1,650 cusecs on 50 days.

24. There is considerably more silt in the main canal and its branches this year than there was in either of the past two seasons, due probably to the high river bringing in large quantities of silt, practically right up to the end of the season.

25. Within the limitations imposed by very deficient supply in the latter half of June and all July the canal and its branches worked excellently. Khariro branch had been regraded during the working season and as a result the supply at the tail improved appreciably. The tails of Unharwah and Nasir branch did much better than usual due chiefly to the fact that there was less demand than usual in the upper reaches on account of the heavy rainfall.

26. The canal was opened on 1st June as usual and finally ceased to flow on 8th November 1917. The water-supply was somewhat deficient in June and July, but rotations were enforced. The zamindars suffered very little although rice transplantation was somewhat delayed. Begari Canal.

27. The canal worked well, but owing to heavy erosion at the head combined with the head regulators having to be practically closed in August and September, there was considerable deposit of silt in the first 5,000 feet of the canal. This was partially removed during the working season.

28. The maximum level, 11·6 feet, that could be let into the canal was obtained on 33 days and the designed discharge of 5,668 cusecs on 61 days.

29. Owing to heavy rains all over the canal area and to hill torrents flooding the area at the tail, all the cross regulators had to be partially closed during August and September, with the result that the karias taking off below and near these regulators were placed at a disadvantage.

30. Four breaches occurred, one above Choi regulator, which did no damage, and three at the tail of Begari Canal, which did considerable damage. Water was excessive at the tail owing to the fact that it was impossible to cut off sufficient water at the Choi regulator. The maximum was cut off, which the right bank of the canal above the regulator could stand.

31. Sirwah and Edanwah were very badly breached by hill torrents.

32. Choi branch again worked excellently and there were very few complaints from zamindars. Rice cultivation seems to have extended considerably this year, which is at least a sign that water is sufficient and that the zamindars have some faith in the canal. Rabi has also increased, partly due to pressure being put on zamindars to grow wheat and also to the fact that they are realizing its advantages. The other branches of the Begari also worked well.

33. The Mahiwah was opened on the 13th June 1917. This year the canal received a greater proportion of its supply from the Lalugah than from the Gudu Dhand and it is likely that this will be its chief source of supply in the future. Mahiwah.

34. All wide portions of the main canal and feeders were groined, which did away with the necessity of silt clearance and caused the silt from the head regulator to Mirkosh to be scoured out.

35. The Kharif discharge up to the 5th of August was very deficient, after which full supply was maintained till the end of the month.

36. Very big areas of rabi cultivation were sown this year and rotation was resorted to with good effect.

37. The Sukkur Canal was opened on the 28th May 1917. Full supply level at the Shikarpur road bridge in the 3rd mile was recorded on five days only during the season, although during August and September there was a big cut off at the head regulator. This unsatisfactory state of affairs is due to the banks being weak, also the Ghangra regulator is too weak to allow of more than a foot heading up. Sukkur Canal.

38. In order to keep the dhand feeding the Rahuja Head scoured and to do away with the necessity of silt clearance, side groynes were constructed in the worst portion which produced the desired result.

39. No clearance was done in the main canal, but silt banks were removed by means of side groynes.

40. The Ghar Canal was opened on the 27th May and continued to flow up to the 19th November 1917. Ghar Canal.

41. The full supply level at the head was recorded for 25 days in August, 5 days in September and one day in October, whereas in 1916 full supply level was not reached once.

42. This good result was greatly due to the big earthen dam that was constructed across the Ghar Dhand just below the Ghar Head.

43. The bed of the Nurwah at head was brought up to proper level by the construction of massive bed and side groynes which produced the required result.

44. The Naurangwah, which still silts badly, is gradually being brought up to proper section by means of side groynes. The raising of the Nurwah bed also improved its supply considerably.

45. The Fordwah, a feeder to the Ghar at its 25th mile, takes off the Ford Dhand. Both dhand and canal worked well although the head regulator remained closed practically throughout the season.

46. The Sattah Canal and its branch, the Rajwah, worked satisfactorily but was affected by the low river up to the 10th August 1917. Until the cut from the "Kohri" becomes canalized there will be necessity for keeping it cleared, which is done at present. Sattah Canal.

47. Rice seedlings withered in July and rats did much damage to standing crops late in September and October.

(ii) Works for which only Revenue Accounts are kept.

48. The principal canals under this head are the Sind, Western Nara, Pinyari, Kalri and Baghar Canals.

Sind Canal.

49. The Sind Canal was opened on the 2nd June 1917. Although the river was low in June and July, Colonel Fife's Channel worked comparatively very well and the supply after the 5th of August was more than sufficient, which enabled large areas of rabi to be sown.

50. Silt clearance on this canal and branches has been practically abolished by the construction of groynes where necessary. The pavements of all branches were raised to their working beds and the bed gradients were all remodelled with satisfactory results. There is a great necessity for improving the working of all branches of this canal; this work has been commenced with vigour.

51. There was active erosion at Loi, which heavily silted the old head feeding the Mirzawah.

Western Nára.

52. This canal was opened on the 1st of June 1917 with Bukkur reading 6·0 feet. It flowed with 3·5 feet reading on the new Akil Regulator as the cleared bed of the Gharo "B" feeding the Western Nara was kept to correspond with 3 feet on Bukkur.

53. The supply during June and middle of July was poor; the water then commenced to rise and reached a sufficiently high level of 12·3 feet on the 7th of August 1917. The regulator, which was kept fully open from the beginning, had then to be closed as water was not required below on account of floods, due to rain, which commenced to pour in and continued till the beginning of October.

54. The canal worked satisfactorily this season. Notwithstanding the late rise, the kharif outturn would have been satisfactory had it not been for the torrential rains. These not only submerged all the cultivation in low ground but brought down unprecedented floods from the hills which caused several breaches and overtopped the banks of the canal below mile 68 at several places and flooded almost all the cultivation on both banks of the canal. The canal ceased flowing on the 7th November 1917. The new Feeder commenced to take off direct from the river in 1916, but this year it again took its supply from a shallow dhand. It was opened on the 10th June and was closed on 7th August 1917. There was no complaint of deficiency and the crops grown were good.

55. The Pritchard Canal, the second feeder of the Western Nara, was opened on the 1st June 1917. Supply was deficient up to the beginning of August, but from the 8th August to 10th October the 2nd regulator had to be closed except for purposes of scouring out silt. The cultivation was normal and flourished. There were four breaches above the head regulator and one below it.

Pinyari Canal.

56. The Pinyari Canal and branches were opened on the 12th May 1917 and taking into consideration the lowness of the river, worked fairly well. Rotation was resorted to when supply was deficient with good results.

57. Seedlings withered on high lands in July and rats attacked the rice crop in September and October. Work on reduction of size of karia vents was continued.

Kalri.

58. The Kalri Canal was opened on the 17th June 1917. Its supply was very deficient up to the 10th of August, but afterwards till 10th October it was far in excess of requirements.

59. This canal is not working satisfactorily owing to the faulty alignment of the main canal and branches. The lands at the tail are liable to be flooded by breaches in the Baghar banks.

Baghar Canal.

60. The Baghar Canal, really one of the deltaic mouths of the Indus, has no head regulator. Its supply up to the 10th August was very inadequate and as a consequence many of its branches did not flow until very late in the season. The subsequent high and well maintained level of the river gave them an abundant supply, and had it not been for the extensive damage caused by rats, favourable crops would have been reaped.

61. The Baghar, not having a head regulator, breaches its banks continually when the level of water is high and does extensive damage to cultivation.

Unfinished Works.

62. The following are the principal original works under this head which were either commenced during the previous year or during the year under report but were yet in progress:—

	Expenditure during 1917-1918. Rs.
Additions and alterations to the Public Works Department Bungalow at Shahpur	1,773
Constructing a head regulator over Chario Wahur Canal	28,175
Constructing Daroga's landhi at Budhapur ...	1,104
Additions and alterations to Inspection Bungalow at Mehar	3,863

3.—INDUS LEFT BANK DIVISION.

(i) Works for which Capital and Revenue Accounts are kept.

63. While all the canals in the Right Bank Division take off direct from the Indus River, those in the Left Bank Division fall under two groups, *viz.*, (*a*) the Eastern Nara System and (*b*) canals taking off direct from the Indus.

64. Under (*a*) are the Nara River, the Jamrao, Mithrao, Khipro, Thar and Hiral Canals, of which the Khipro Canal flows during the inundation only, the others being perennial. The Thar, though classed as perennial, is closed on or about the 1st December each year to save the country round Umarkot from being water-logged.

65. Under (*b*) are the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals, all being classed as inundation canals though the Fuleli receives a fair rabi supply.

(a) *Canals taking off from the Eastern Nara.*

66. The Nara Supply Channel is an artificial channel 12 miles in length taking off the river on its left bank above Rohri and forming the mouth of the Nara, an ancient course of the Indus. The supply channel worked satisfactorily during the year and no necessity for the services of a dredger was felt. The minimum discharge recorded during the year was 525 cusecs with a downstream reading of 6·1 feet at the head regulator. Owing to the construction of the Flood Diversion Bund, the Ghotki and Sarhad floods now enter the Nara River at the 34th mile instead of the 12th mile, and these, though supplemented by abnormal rains, did not reach the Eastern Nara District. The maximum height recorded at the 12th mile was 26·7 as compared with 26·1 last year. The head regulator was kept open throughout the inundation to prevent silting at the head. Nara Supply Channel.

67. Necessary repairs consisting of stone pitching and groining to the channel and its sides were carried out during the year. Fluctuations of silting and scouring occurred at the mouth and were carefully watched and recorded as usual. The earthwork of the Flood Diversion Bund (29 miles), mentioned in last year's report, was completed during the year under report, the expenditure incurred being Rs. 55,668. The total expenditure on the project has amounted to Rs. 3,83,190.

68. The Nara, from the end of the Nara Supply Channel to the Jamrao, is about 96 miles and from the Jamrao to the Thar weir about 100 miles in length. It commands over 500,000 acres of culturable land. The area cultivated during the year on the Nara in the Eastern Nara District was about 33,607 acres as against 42,463 acres in 1916-17 and 39,589 acres, the average of the previous three years. The Nara.

69. The Nara bed is in fairly good condition. During the year under report surplus water from the Nara was allowed to pass through Mooral and Baghdad Sangs from 12th August to 27th November 1917 to the Makhi Dhand which forms a reservoir for supplementing the rabi supply of the Mithrao. This greatly helped the Mithrao when deficiency was experienced in the latter part of the year (January aud February) and enabled the whole supply of the Nara to be given to the Jamrao Canal. The benefit has proved so obvious that instead of taking the source of supply of the Right Bank Distributary of the Makhi Distributaries Project (now under construction) direct from the Nara, thereby cutting off the Makhi Dhand supply to the Mithrao, it is proposed to take the head of this distributary from above Bakhora regulator and retain the Makhi Dhand for the rabi supply of the Mithrao.

70. No capital expenditure was incurred on the Jamráo Canal during the year. The recoveries of the year from colonists amounted to Rs. 3,724. Jamrao Canal.

71. Current repairs were carried out as usual to the head works, which were maintained in good order throughout the year and were not subjected to any undue strain as the maximum and average discharge passing down the Nara were both low. The scour hole near the divide line upstream of the weir completely silted up after the construction of the bunds across the inundation channel and the bund in continuation of the divide wall. These bunds stopped all cross-currents and now no further anxiety is to be apprehended.

72. The approach channel has maintained its satisfactory condition. Soundings were regularly taken and the behaviour of the silt trap carefully watched for any signs of undue silting. Owing to rainfall an opportunity was taken in September of closing the canal for four days and scouring out the silt trap by raising the undersluice gates. The groynes at the nose of the island at the head of the approach channel and also those on the opposite side on the right bank were maintained in good order and they continue to prevent all erosion at these places.

73. The canal, which was closed on 15th March, was reopened on 26th May after thorough clearance in the first 13 miles had been effected at a cost of Rs. 1,34,780. Some silt entered the canal during July, August and September as usual when the river was heavily charged with it in spite of all precautions. Experience has shown that it is not possible to exclude silt during the height of the inundation as experience has also shown that it is scoured out in the rabi season when the water is much clearer. Rabi rotations were started later than usual owing to the long duration of the inundation. At the end of the rabi season there was a sudden rise in the river in March 1918. Full advantage was taken of this rise to flush out the canal with clear water. The silt was scoured out and the section completely restored to the normal.

74. The area cultivated during the year was 240,170 acres as compared with 239,426 last year and 259,039 acres, the average of the previous three years. The area under cotton was about 106,500 acres as compared with 88,493 acres in the last year and 93,441 acres, the average acreage of the previous three years. Owing to heavy rains the outturn per acre was less than in the previous year. The price of cotton reached a phenomenal figure

and had it not been for the damage caused by the abnormally heavy rains, the zamindars, though on the whole they did well, would have made much larger profits.

75. An allotment of new land to the extent of 1,340 acres was made during the year on this canal.

The Mithrao.

76. The Mithrao is, as already mentioned, a perennial canal taking off from the Nara above the Makhi weir. The water-supply in the canal was fairly good on the whole, though deficiency was felt at the beginning of the season. All the branches worked well.

77. The 30th and 45th mile distributaries worked satisfactorily, but deficiency was experienced on the 30th mile Left Bank Distributary. Remedial measures have been taken.

78. The capital expenditure of the year amounted to Rs. 20,822 and was mainly incurred on constructing Makhi distributaries, right and left, and head distributary *ex*-Hiralwah.

79. The area cultivated during the year under report was 117,885 acres as compared with 127,389 acres in the last year and 129,418 acres, the average of the previous three years.

Hiral Canal.

80. The Hiral Canal was opened on 11th May and worked satisfactorily. The canal is designed for the cultivation of dry crops only and rice is entirely prohibited. But owing to the declining prosperity of the tract in the past this restriction was relaxed and, as mentioned in last year's report, zamindars were permitted to grow rice for another three years in low-lying and water-logged lands and also in high lift irrigated kalar lands in which dry crops cannot be successfully grown. The project referred to in last year's report for the improvement of the Hiral tract by the provision of drainage channels and the construction of the head distributary Hiral to convert lift lands into flow at tail of certain minors was sanctioned during the year, and the work is in progress.

81. The Hiral commands 49,900 acres of culturable land. The cultivation during the year was 10,303 acres as compared with 17,653 acres in the last year and 17,557 acres, the average of the previous three years.

82. No grant of new land was made to local zamindars or Junior Talpurs on the canal during the year, but 23 acres of fallow forfeited area were restored to the zamindars. An area of 776 acres was, however, forfeited during the year under fallow rules on account of non-payment of fallow assessment and 142 acres of grants cancelled.

Thar Canal.

83. The Thar Canal and its branches worked satisfactorily. As the river was low at the beginning of the season the canal did not get its full supply level of 8·7 feet and rotations had to be resorted to upto 12th August at the intermediate regulators.

84. The cultivation on this canal during the year was about 52,919 acres against 57,724 acres in the last year and 59,605 acres, the average of the three previous years.

85. A project for two distributaries (the 3rd mile Right and 7th mile Left Bank) designed to economize the present extravagant supply of water now obtained direct from the main canal by low lying karias between miles 3 to 8 on the Right and 7 to 13 on the Left Bank has been sanctioned and it is hoped that funds will be available in the next year to start construction on them.

Khipro Canal.

86. The Khipro Canal commenced flowing on the 26th May and ceased to flow on 1st November. The supply was below the normal in the beginning of the inundation, but on the whole the canal did as well as usual.

87. The cultivation during the year was about 3,133 acres against 4,592 acres in the last year and 4,019 acres, the average of the previous three years.

(b) *Canals taking off direct from the Indus.*

Nasrat Canal.

88. The supply in the Nasrat Canal was deficient during June and July and the fluctuations of the river caused the Lundi Dhand to silt at its head, causing a further decrease in the supply. The heavy rainfall in August and the usual rotations at intermediate regulators helped the cultivation to a very great extent. The canal was opened on the 8th June and ceased flowing on the 10th October. Flood water from the Khairpur State found its way into the Lundi Dhand below the 4th mile and caused heavy silting. A portion of this silt was scoured out in September and October, but a great deal remained and was removed in the working season at a cost of Rs. 33,000. In 1916-17 the bed of the Dhand was cleared to 65 feet in width and to a level corresponding to 4 feet at Bukkur. In the present year it was cleared to correspond to 3 feet at Bukkur, the same bed width being maintained, but side groynes were constructed throughout, canalizing the irregular section of the Dhand and reducing the width to 105 feet upto the Mehrabwah head and 90 feet below it. These groynes, it is expected, will reduce silting in the bed, and if this expectation is realized a great source of present trouble and expense will be diminished if not removed.

89. The cultivation during the year on this canal was about 96,244 acres against 101,480 in the last year and 90,699 acres, the average of the previous three years. The low river at the beginning of the inundation had a bad effect on the cultivation of cotton which requires early water. There was consequently less cotton sown than usual though there was an increase under bajri which was sown in August when water was in abundance.

90. The total expenditure on the excavation of karias and kasis upto the end of the year on the canal amounted to Rs. 2,88,860, against which Rs. 3,08,317 have been recovered from

the zamindars. The latter amount includes Rs. 3,637 recovered during the year under report. An allotment of 1,110 acres was made on this canal during the year.

Dad Canal.

91. The Dad Canal was opened on the 3rd of June and ceased flowing on the 18th of December. The supply was deficient at the beginning and necessitated very careful rotations at all regulators, but it was in excess after the 10th August when heavy rain fell. This rainfall caused an abnormal height of water above the head regulator and also river spill against the banks of the Dad feeder and the Herbertwah branch. Further owing to such exceptionally heavy rain at a time when the river was at its height the floods at the tail of the Dad were worse than in former years. In spite of several cuts in the right bank of the Feeder, the gauge reading rose to 16·7 upstream and 10·0 downstream of the head regulator and water below the 50th mile became uncontrollable. Rain and canal water collected in the low lying triangle formed by the Dad, the Yarowah and the Jamrao and the water found its way into the compound of the Inspection Bungalow at Khadro damaging the bungalow and almost destroying the garden. A project is nearing completion for the proper control of the water in the last 36 miles of this canal. Although there was no silt clearance in the Dad feeder, heavy repairs were carried out to banks which were damaged by rain and wave wash.

92. The cultivation during the year was 103,246 acres against 125,169 acres in last year and 109,567 acres, the average of the previous three years.

93. The total expenditure on the construction of karias and kasis to the end of the year under report amounted to Rs. 1,32,574, against which Rs. 1,37,320 have been recovered from the zamindars. The latter amount includes Rs. 1,404 recovered from colonists during the year.

94. New land to the extent of 392 acres was allotted during the year.

95. The Ren Distributary is fed by the Dad Canal. Owing to the low river at the beginning, the distributary received its supply by rotation, the necessity for which, however, ceased in August with the plentiful supply in the Dad Canal and the heavy rainfall that then occurred. The total expenditure on this project to end of year under report was Rs. 2,18,336.

96. New land to the extent of 1,933 acres was allotted on this canal.

Fuleli Canal.

97. The Fuleli Canal worked exceptionally well during the year and owing to a high river, the supply was maintained till late in October. The copious rainfall was beneficial to crops on high land but submerged those on low lying lands. The canal was closed at Alipur to carry out extensive repairs to the boat span of the regulator which had been damaged and in order to construct a new road bridge across the canal at Talhar.

98. The dhand supplying the *old* Fuleli having silted at the upstream mouth, a cut was made direct from the river to supply the canal. This gave an excellent supply and there is every possibility of the canal eventually giving a perennial supply.

99. The Shadi Distributary ex-mile 71/5 of the Fuleli, completed during the year, gave a very good supply to the lands settled on it and also relieved the Shadiwah Large of some 2,700 acres of cultivation.

100. The area cultivated during the year was about 411,500 acres against 444,821 acres in the last year and 420,055 acres, the average of the previous three years.

101. The capital expenditure on this canal during the year under report was Rs. 25,675 and was incurred on the new mouth to the Dokiawah above Alipur Regulator.

Hasanali Canal.

102. The main Hasanali Canal and its branches worked satisfactorily. The area under cultivation was about 18,500 acres against 20,023 acres cultivated in the last year and 18,732 acres, the average of the previous three years.

Canals in the Hyderabad Canals District.

103. All the canals in this district worked satisfactorily. Water in the Great Marak Canal was almost uncontrollable, due to there being practically no draw off for irrigation on account of abnormal rainfall during August and for want of a regulator at its head. There were several breaches which caused damage to cultivation. The construction of a head regulator is in progress and will be completed before the inundation of 1919.

104. The cultivation this year in the whole of the Hyderabad Canals District will be about 272,490 acres against 294,879 acres in the last year and 283,162 acres, the average of the previous three years.

(ii) Works for which only Revenue Accounts are kept.

105. The principal canals under this head are the Naulakhi, Mehrab and Dhambro in the Nasrat Canals District and Ren, Gharo Mahmudo, Kari Shumali and Nasir in the Hyderabad Canals District. All the canals under this head in both the districts obtained on the whole a good supply.

106. The new head given to the Naulakhi Canal in 1917 was opened on the 4th June and gave an improved supply. As the river rose the discharge became excessive and as the canal is without a regulator several breaches occurred though escapes were opened to reduce the height of water. The high level of the river in October kept the canal flowing throughout this month and the bed of the 1917 Cut scoured down from a level corresponding to 3 feet at Bukkur to 1·5 feet. The old head of 1915 was not opened during the year. It has proved most advantageous to have two heads to this canal and in the

inundation season of 1918 either the 1917 head or the 1915 head, whichever is found most suitable, can be utilised. It is very necessary to provide a Head Regulator at any rate to this canal and the matter is in hand.

107. The new head of 1916 to Mehrabwah was used during the inundation and worked satisfactorily. This canal possesses no Head Regulator and here again one is needed and the project is in hand.

4.—PROTECTIVE EMBANKMENTS.

108. The maximum gauge reading at Bukkur this year was 15·8 feet as compared with 13·6 feet last year. The water level against the Kashmor bund varied from 0·4 foot to 1·0 foot higher than last year in the first section and from 0·5 foot to 1·8 feet higher up and generally was only about 6" lower than in 1914 (maximum flood year) but 0·4 foot higher against Tori Bund.

109, Erosion was active between miles 3/6 and 4/1, the maximum of 3,685 feet being along the ordinate at 3/6. The front bund is still intact, but the river at the nearest point is only 966 feet away.

110. When the river suddenly rose in the beginning of August, the 1896 loop had to be wetted more quickly than usual with the result that 10 leaks occurred in one day and two, which were close together, developed into a breach which was closed immediately. The bund is quite incapable of withstanding any sudden rise of water against it and it may be necessary to trench the 1896 loop so that it can be artificially wetted. It also may require to be raised and strengthened next year.

111. Water first touched the bund at 10/5 of the Haibat loop in the early part of June. The Tori, Gouspur and the above bunds were, however, previously wetted by the trench system.

112. In the Shikarpur Canals the spill water stood against the whole Sukkur Begari bund, the maximum depth being 11·0 feet. There were, however, no breaches and only one leak in mile 2/2 which would have had very bad results had it not been promptly attended to. The new Bichanji loop was satisfactorily wetted by a gravity trench.

113. Kasimpur bund was breached in three places, but no attempt was made to close these as water was required for flooding high lands. It appears that this bund serves no very useful object now. The Naich bunds and other bunds, however, stood the floods well.

114. In the Ghar Canals District water first touched the Mitho Phulu bund in miles 30/4 and 33/2 on 7th August and at miles 20/1 and 21/1 of the Jhalli bund on the 8th idem and stood in the depressions against the latter bund till 6th October. The maximum depth of water against these two bunds was 7·4. The bunds were wetted as usual and are in good condition.

115. In the Western Nara District the extension of the bund to Sehwan was completed at a cost of Rs. 2,43,378. The water touched the bund in almost its entire length excepting miles 41 to 56 and the maximum depth of water was 11·7 feet against 10·3 feet last year. It was even greater than that of 1914 when Bukkur recorded a reading of 17·4 feet. The work of raising the bunds was therefore considered necessary and taken in hand.

116. There were seven breaches in the Nara bunds and those occurred at miles 95/2, 89/6, 93/1, 87/6, 67/5, 6/1 and 0/3 and of them only the last four were successfully closed, though with great difficulty. Two sluices, one in mile 67/5 and the other in mile 0/3, were washed away and a baulkshed in mile 93/1 was partially damaged as a result of the breaches in those places.

117. The water flowing through the breaches which were not closed damaged the kharif crops, but on the other hand admitted of a large area ultimately being brought under rabi.

118. The maximum depth of water against the Manjhand bund was 7·3 at mile 5/0. No leak or breach occurred, but the bund has since been eroded away.

119. In the Karachi Canals District the river bunds run alongiboth sides of the river for a length of 52 miles on the right bank and 94 miles on the left bank. On account of heavy rainfall in August and very high and protracted inundation in the latter half of the season, the whole bund line had to stand a very severe test. The free board along a considerable length of the Baghar Uchito bund was inadequate. This and all other bunds in the district had consequently to be raised in places. The bunds, however, stood well on the whole.

120. Two simultaneous leaks alongside the sluice in mile 20/5 of the Baghar Uchito bund developed into a breach. Owing to the rising river and widening of the breach it was not closed and the damage to kharif cultivation in the tract crossed by the spill in Ghorabari and Mirpur Sakro talukas was very considerable. A mangli has this year been constructed round the breach.

121. There are six short bunds in the Nasrat Canals District all of which had the river water against them during the inundation.

122. The Naulakhi Nasrat bund which was partially eroded in 1916 was not repaired. The land behind it is high and the zamindars are anxious to have it flooded. As only about two feet of water is likely to overtop the land behind the bund, the banks of two old karias were strengthened to act as a bund in case of necessity.

123. A proposal to construct a spur bund from the Dad to the edge of the river is being investigated. This would prevent the spill water which enters the Upper Dad sub-division from flowing south into the Lower Dad sub-division and the Hyderabad Canals District.

124. The Ren bund in the Hyderabad Canals District stood well during the year under report. There was water against it practically throughout its length, the maximum depth being 5·5 feet.

125. All the bunds in the Fuleli Canals District were subjected to high water levels, but with the exception of two leaks in the Hajipur bund there was no trouble. The new bund from the Dhadko to the Mulchand wah estimated to cost Rs. 19,801 was in progress and an expenditure of Rs. 10,983 was incurred on it during the year. Sluices were also constructed over karias passing through the bund.

126. The 1st mile loop of 1900 and the 11th mile loop of 1910 were wetted to heights equivalent to 21·3′ and 20·0′ on the Kotri gauge, respectively, and both loops can be considered quite safe with ordinary precautions.

5.—INDUS RIVER COMMISSION.

127. The expenditure on works and surveys was charged to "43-Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept". Indus River Commission Works and their classification.

128. The usual topographical surveys, aggregating 2,555 miles in length, of the Indus, dhands, bunds, &c., were carried out. The Indus from Rojhan in the Punjab to the point of its bifurcation, 528 miles, the Haideri river, 36 miles, and the Uchito, 65 miles, were also surveyed and plotted. Surveys of the Indus.

129. The Khairpur boundary rails were inspected as usual. The work of demarcating the boundaries between Sind and Bahawalpur State was taken in hand during the year and will be finished next year. Khairpur Boundary rails and Bahawalpur State boundary demarcation.

130. Gauge readings of the river were taken daily at 11 stations, twice a week at 4 stations and weekly at 9 stations. River Gauges.

131. Discharge observations were continued at Sukkur and Kotri, and observations of all kinds were also made as usual. The results will be published in the Indus River Records. The discharge at Sukkur during the inundation and the minimum discharge of the year, compared with the results of previous years, are as follows:— Scientific work and discharges of the Indus.

—	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.
	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
June	8,432,000	7,401,000	8,925,000	8,038,000	7,233,000
July	10,586,000	21,453,000	10,756,000	13,044,000	8,603,000
August	13,377,000	18,359,000	11,834,000	18,227,000	18,941,000
September	7,670,000	13,863,000	7,083,000	7,972,000	12,985,000
Total ...	40,065,000	61,076,000	38,598,000	47,281,000	47,762,000
Average discharge .. ..Cusecs...	328,402	500,623	316,377	387,549	391,492
Maximum discharge ... ...Cusecs...	621,156	948,728	430,445	735,348	740,279
Minimum discharge, June to September ... ...Cusecs...	108,513	176,894	134,888	73,287	126,049
Minimum discharge observed throughout the year ... ...Cusecs...	23,719	40,664	25,546	17,568	28,083

Note.—These totals and their constituent figures are the sums of the daily observations of the Indus in cusecs. To arrive at its total discharge during the period concerned, the figures given in the table must be multiplied by 86,400 (the number of seconds in a day).

132. The discharge observations of the Indus at Mithankot above and below its junction with the Chenab were continued. The minimum discharge was 20,100 and 29,697 cusecs, respectively, at the two sites.

Extensions and Improvements and Special Repairs.

133. The estimated cost of the works under these heads sanctioned or approved during 1917-18 by the Indus River Commission for execution by the Executive Engineers and by the Commission is given below :—

District.	Extensions and Improvements.	Special Repairs.	Total.
A.—Indus Right Bank Division.	Rs.	Rs.	Rs.
Begari Canals	55	.....	55
Shikarpur Canals	164	1,93,764	1,93,928
Ghar Canals	1,464	.....	1,464
Western Nara	1,55,699	.....	1,55,699
Karachi Canals	96,791	778	97,569
Total ...	2,54,173	1,94,542	4,48,715
B.—Indus Left Bank Division.			
Fuleli Canals	.....	225	225
C.—Indus River Commission.			
Works under the direct control of the Indus River Commission	42,196	.....	42,196
Grand Total ...	2,96,369	1,94,767	4,91,136

Maintenance and Repairs.

134. The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 12,507, of which Rs. 2,420 were spent on river gauge establishment at Sukkur, Kotri, Jerruck and the Indus Delta.

Total Expenditure.

135. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	22,827
Repairs	12,507
Establishment	80,901
Tools and Plant	8,197
Total ...	1,24,432

Snagging operations.

136. Snagging and clearance work with dredger has been discontinued owing to war. The dredger "Mudlark" is now being used in the Tigris where it has proved most useful.

Erosion.

137. Heavy erosion occurred at mile 3/6 of Kashmor Bund and at mile 10/2, 28/2 to 30/2 of the Sukkur Begari Bund, and 4/3 of Manjhand Bund, the maximum rate of erosion being 740, 820, 940 and 305 feet per week, respectively.

Sukkur Barrage.

138. Some surveys in connection with "New Head to the Nara Supply Channel" and the Right Bank Canal were executed under the supervision of Mr. Nazareth. The Sukkur Barrage District is now in charge of Mr. Musto, who is preparing plans and estimates and will continue the survey work next season which Mr. Nazareth had not completed.

6.—MISCELLANEOUS.

Plantations.

139. The existing plantations on canals and bunds in the Left Bank Division were well cared for. New trees were planted in all the districts along various canals and bunds and they are generally doing well.

Irrigation of cotton.

140. No Egyptian cotton was grown in this division during the year.

141. The following table shows certain details regarding the watering of indigenous cotton crops :—

District.	Lift lands.		Flow lands.		Date of last watering varied from to
	Number of waterings.	Intervals between.	Number of waterings.	Intervals between.	
Nasrat Canals ...	.....	.....	7 to 10	7 to 20 days.	5th September to 11th October.
Hyderabad Canals ...	5 to 8	.....	.....	.....	22nd September to 20th October.
Fuleli Canals ...	5 to 8	6 to 29 days.	.....	.....	3rd September to 12th October.
Eastern Nara ...	.....	.....	2 to 6	.....	24th July to 30th September.
Northern District Jamrao Canal.	7 (average).	.....	7 (average).	.....	3rd November and 9th February.
Southern District Jamrao Canal.	5 to 7 (average).	.....	5 to 7 (average).	.....	5th January and 16th February.

III.—Deccan and Gujarat.

1.—NORTHERN DIVISION.

142. No relief was required. The rainfall was prolonged and generally much above the average. The demand for irrigation was consequently small. General remarks.

(i) First Class Irrigation Works.

143. The rainfall gauged at Ahmedabad and Prantij during 1917-18 was 49·53 and 47·23 inches, against an average of 29·58 and 30·78 inches respectively for the last 30 years, including the year under report. The monsoon broke early, *i.e.*, in the beginning of May, and lasted up till October. The rainfall was light and irregular in the months of May and June, but it was plentiful and continuous in the latter part of the monsoon. The Hathmati Canal and the Khari System.

144. The river Hathmati was frequently in flood during the months of August, September and October 1917. There was a moderate flood in the river on the 29th August and on the 9th and the 18th September, when the water level rose to 1·20, 2·30 and 2·10 feet, respectively, over the weir crest. The canal continued to flow from 12th July 1917 to the end of the year. Although the rainfall was very irregular in the beginning of the monsoon, much care was taken to protect rice seedlings which, with the later rains, enabled about 1,100 acres of rice crops to be successfully matured. The rabi crop saved the situation for poor cultivators as with careful distribution almost all the area irrigable was protected, and thereby a general calamity was averted in the tract commanded by the Hathmati Canal. The run off in the khari due to small rainfall on its catchment was very little upto the end of August. The water, however, was utilized partly in filling the Chandola tank and partly, up to end of July, in saving seedlings. The water stored in Chandola tank was used in transplantation of rice in Danilimda and surrounding villages. The Bokh Reservoir was filled two-thirds and the water was kept in reserve to save crops sown in the Kalambandi villages and early sown rice in other villages of Daskroi Taluka. The distribution of water in the Kalambandi villages by the Khari Cut system was commenced from the 27th August. By the end of August there were good rains and there was sufficient supply everywhere. The Khari Cut Canal was, however, kept running, and water was distributed almost in all areas in which rice was transplanted, so that the people should not have cause for complaint of deficiency if rain failed later. But as there was good rain in October, the last watering was not required in some of the areas. All the tanks in the tract were nearly full at the end of the season, and the water thereof was utilised for rabi and hot weather jowari crops.

145. The area irrigated and the gross assessed revenue as compared with the average for the triennium ending 1916-17 are given as under :—

	1917-18.		Average of the previous three years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Hathmati Canal	5,644	14,020	2,622	7,931
Khari Cut Canal	10,470	71,110	7,161	48,035

146. The area irrigated and the gross assessment on the Wangroli, Tranza-Nagrama, Savli and Saiat tanks as compared with the average of the triennium ending 1916-17 are shown below :— Tanks in Kaira.

Name of tank.	1917-18.		Average of the previous three years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Wangroli	283	1,576	720	2,713
Tranza-Nagrama	30	366	...	264
Savli	120	676	916	3,390
Saiat	148	896	303	1,614

The Wangroli, Savli and Saiat tanks were full, and the Tranza-Nagrama tank filled partially. Due to favourable rainfall, irrigation was not much resorted to, kharif irrigation being almost nil. The water was, however, used in irrigating rabi and hot weather crops of wheat, gram and jowari. All these tanks were maintained in good condition at a cost of Rs. 11,328. The construction of the Bhalada high level canal from the Wangroli

tank was completed at a total cost of Rs. 4,612, the expenditure incurred during the year being Rs. 1,038.

Futelao tank.

147. When the water rose to R. L. 105·75, *i.e.*, 0·75 feet above the sill level of the regulators in the waste channel, though it was still 1·25 feet below the F. S. L., slips began to occur in the dam on account of wave action against its south-east corner, and cracks appeared; the outlets were consequently opened and the water level reduced to R. L. 102·00, above which it was not allowed to rise afterwards in the season. The work of bringing up the slopes to 2 to 1, where deficient, and of providing dry and low pitching to the inner slope is in hand. On account of good rainfall in the season, the people did not take water for irrigation, which was, therefore, less than in the previous year, the area irrigated being 45 acres against 89 acres and the revenue Rs. 90 against Rs. 268. A portion of the bed of the tank was given out for cultivation.

(ii) Second Class Irrigation Works and Agricultural Works.

Khari sluices.

148. In the beginning of July, though good rain fell in Daskroi and the Kalambandi villages, there was a dearth of seedlings and many people sowed cotton. Only in a few southern villages of Daskroi, where seedlings were available, could transplantation be made in July and August. In September, when fortunately good rain recommenced and the khari brought down a sufficient supply, those that had not already grown cotton transplanted rice. The heavy rain of October amounting to 7″ or 8″, however, damaged the early sown rice to some extent, and the frequent floods in the khari damaged the crops in low kiari lands. The superior rice again did not give a good outturn, due to the late transplantation and excess of rain.

Muvalia tank.

149. The rainfall gauged at Muvalia was 38·68″. The tank was full; but due to the good rainfall the demand for irrigation was small, the area irrigated being 478 acres and the revenue therefrom Rs. 1,532. The tank and the canals were maintained in good condition at a cost of Rs. 2,967 and the total revenue was Rs. 1,875. The Left Bank Canal requires to be widened to allow of a greater discharge in the rabi season. A regulator has been provided across the canal at its crossing with the station road for filling the Dohad Gam Tank from its own catchment as well as from the Muvalia tank.

Old tanks.

150. Improvements to 84 and repairs to 58 small irrigation tanks in the Gujarat Irrigation District, and repairs to 3 tanks in the Surat and Broach District, were executed at a total cost of Rs. 75,859 and Rs. 14,757 respectively. In the Gujarat Irrigation District three talukdari tanks were also repaired during the year.

Drainage channels.

151. The drainage channels in the Surat and Broach and Gujarat Irrigation Districts were maintained and the reclamation works in the former were repaired.

Works in progress.

152. The following important works were in progress during the year :—

(1) The Timba tank at Harsol, Taluka Prantij, Ahmedabad District.

(2) The Mateval tank at Salun and Nanadra villages of Thasra, Kaira Collectorate.

(3) The Fudsar tank at Lasundra, Taluka Kapadvanj, Kaira Collectorate.

2.—CENTRAL DIVISION.

153. In the Central Division there are few irrigation works of importance. The area irrigated on First Class Irrigation Works was 11,529 acres and the gross assessed revenue Rs. 1,72,124 as against 12,724 acres and Rs. 1,47,290, the averages of the previous triennium.

154. The year under report was favoured with more or less continuous and timely rainfall throughout the Central Division and consequently there was a less demand for canal water on the whole.

(i) First Class Irrigation Works.

Ekruk tank.

155. In connection with the water-supply to the town of Sholapur, the laying of 15″ and 12″ gravitation mains from the tank to the municipal pumping house was completed and water was issued, for the first time, to all parts of the town through the mains during the year. On this tank the lease system (rabi leases) has been in vogue for some time now. It has become very popular among the irrigators who have recognised its advantage and take to it very freely. There was a large increase in revenue mainly due to increased consumption of water for non-irrigational purposes. The Agricultural Department has been experimenting on new methods of planting sugarcane on the Ekruk canal, similar to those tried at the Manjri Farm, under the supervision of their officers. Thirty acres were allowed to be planted with sugarcane for these experiments on payment of the usual water rate by the owners who offered to try the new methods.

Jamda Canals.

156. These canals form an important irrigation system in the East Khandesh District. Their supply is not, however, assured for want of a storage tank. Though at present the river discharge is supplemented by a supply from the Chankapur tank in the Nasik District, yet this source of supply cannot always be depended on, as the tank has to provide water for a large area directly dependent on it. An important work, costing about Rs. 6,000, carried out in connection with these canals, was the raising of the crest of the weir of the Jamda bandhara to one uniform level. This raising has had the immediate effect, as was anticipated, of increasing the discharge let into both the canals

from the river, but the invaluable advantage of this improvement can only be seen in years of scanty rainfall when a minimum increase of 2,000 acres of rabi cultivation can be ensured. It is needless to say what economic value this increase will have, both as regards outturn and increased return to the irrigators.

157. The eight months rabi block system, recently introduced on these canals, is not yet received favourably by a large majority of irrigators. The area under the system increased from 69 to 262 acres, against a minimum block area of 1,000 acres, which is fixed after making due allowances for agricultural, geographical and other difficulties. Khandesh gets the benefit of both the N. E. and S. W. monsoons and as both were favourable last year the agriculturists did not feel the want of canal water.

(ii) Second Class Irrigation Works.

158. The total expenditure on extensions and improvements and maintenance and repairs to the bandharas situated in the East and West Khandesh Districts was Rs. 8,333. The area irrigated and the gross revenue assessed were 9,466 acres and 77,413 rupees, respectively. There were no important works executed except the usual type of repairs or improvements to bandharas, constructing new masonry cross drainage works, or restoring fallen ones, etc.

3.—DECCAN IRRIGATION DIVISION.

(1) First Class Irrigation Works.

(*a*) *Works in existence.*

Protective Works.

159. The largest irrigation work in operation in the Deccan is the Nira Left Bank Canal, which is situated in the Poona District. Nira Left Bank Canal and Shetphal Tank.

160. During the year under review an area of 34,451 acres was irrigated under this canal. This figure is much below the average, the decrease being mainly due to good and seasonable rainfall and consequent low demand for canal water for monsoon and rabi crops. The gross revenue from all sources was Rs. 4,50,074.

161. The total area irrigated under the Mhasvad Tank was 6,034 acres and the gross revenue realised from all sources Rs. 35,767. The area irrigated is slightly lower than the average area, the fall being due to seasonable rainfall. Mhasvad Tank.

162. The Godavari Canals works consist of— Godavari Canals.

(1) Lake Beale Storage,

(2) Pick-up Weir at Nandur-Madhmeshwar,

(3) Godavari Right and Left Bank Canals.

During the year the greater part of the last 10 miles of the Right Bank Canal was completed. On the Left Bank Canal distributary construction was brought practically to a close and the full length of the canal was in operation. The work remaining to be done on the Right Bank Canal consists of the finishing off of distributary construction and on the Left Bank Canal a few minor channels remain to be completed.

163. The total expenditure incurred on this project during the year was as under:—

	Rs.
(1) Lake Beale Dam	1,571
(2) Godavari Right Bank Canal	26,925
(3) Godavari Left Bank Canal	832
	29,328

164. *Godavari Right Bank Canal.*—The total area irrigated under this canal during the year under report was 14,931 acres and the revenue realised from all sources Rs. 1,91,828.

165. *Godavari Left Bank Canal.*—The total area irrigated under this canal was 6,799 acres and the revenue realised from all sources Rs. 97,710.

166. The increase in areas irrigated under these two canals is due to the extension of irrigation, especially sugarcane.

167. On this new irrigation system, the cultivators have now become familiar with the rules regarding the various kinds of irrigation and a speedy increase of irrigation is expected during the next few years.

Productive Works.

168. The total area irrigated under this system was 13,801 acres yielding a gross revenue from all sources of Rs. 4,56,503 which includes Rs. 2,03,308 realised from the Poona water-supply. Mutha Canals and Matoba Tank.

169. The installation of the Paterson Filter Plant was finally completed during the year and the plant is working quite satisfactorily. The total cost of this work is Rs. 1,75,032.

(b) Works under construction.

Pravara Canals.

170. The Pravara Canals Irrigation Project comprises—

(1) Lake Arthur Hill Storage.*
(2) Pick-up Weir at Ojhar.*
(3) The Pravara Right and Left Bank Canals.

171. The total expenditure incurred during the year on this scheme was as under :—

	Rs.
(1) Lake Arthur Hill Storage	3,73,458
(2) Pravara Right Bank Canal	36,459
(3) Pravara Left Bank Canal	2,06,428
	6,16,345

172. The quantity of masonry work done in the dam during the year was about 7 lakhs cubic feet, the total quantity up to 31st March 1918 being 62½ lakhs cubic feet or about 47 per cent. of the estimated quantity of masonry in the dam. It will take about four or five years more to complete the dam. Besides this, the excavation for the waste weir and the flood embankment on the low saddle on the right bank of the Pravara river was in progress.

173. The central portion of the dam has been raised from R. L. 2,289 to R. L. 2,307. The right bank flank from R. L. 2,289 to R. L. 2,317 for a length of 170 feet, except for a small gap on the down stream, which remained at a lower level. The left bank flank was raised from R. L. 2,289 to R. L. 2,307 on the upstream side and to R. L. 2,317 on the down stream side for about half the width of the dam and for a length of 150 feet, joining the side cliff. The flanks have been further raised another 5 feet for a width of 10 feet on the up-stream for the right bank and on the down-stream for the left bank flank, to bring them to a level 15 feet above the central portion and thereby remove all risk of any flood water passing over the dam, except through the gap intended for it.

174. The caging and ashlar work of the second sluice was completed and the pillars of both the sluices raised to R. L. 2,322.

175. The expenditure during the year on the masonry dam and other works was Rs. 3,73,458, the total expenditure on works only up to 31st March 1918 being 29¾ lakhs rupees. The estimated cost of the dam for works only is Rs. 54,91,730.

176. During the year under report, a crack was noticed in the rock in the foundations of the Lake Arthur Hill Dam on the right bank. After inspection due precautions were taken and the crack opened up and thoroughly grouted in cement. The crack was inspected by a Geologist from the Government of India in April 1918 in whose opinion the steps taken are efficient and satisfactory.

177. All the earth-work and masonry works on the Right Bank Canal having been completed in the previous year, construction during the year under report was confined to the distribution channels in the tail and Rahuri blocks. The tail channel and the main Rahuri distributary were practically completed in all respects. The total area irrigated under this canal was 3,631 acres and the revenue realised from all sources was Rs. 15,520. The increase in the area was due to want of timely rains and consequent demand for canal water for both kharif and rabi crops.

178. On the Left Bank Canal construction work on the main canal was vigorously pushed on and almost all the earth-work was completed. Most of the minor masonry works on the main canal having been completed during the previous year, the bigger works* were taken in hand during the year under report. The progress made during the year on the construction of the distribution channels under this canal was fair. All the main distributaries and water-courses in the first three blocks were completed and a good deal of work was done in blocks 4 to 8. The total area irrigated under this canal was 1,809 acres, and the revenue realised from all sources was Rs. 5,871. The canal was temporarily closed for the work of widening and extension. Water had, however, to be let into the canal for a length of 30 miles on account of unfavourable rainfall during the kharif and rabi seasons.

179. The work now remaining to be done on the Pravara System consists mainly of distributaries which will be completed by the end of 1920.

Girna River Works.

180. The river supply was sufficient for the requirements of the Girna Canal up to 10th January 1918, when water was supplied from the Chankapur Tank. The tank water actually not required for the Girna Left Bank Canal was let down to supplement the supply to the Jamda Canals in the East Khandesh District, at the request of the Executive Engineer of that district.

181. *Girna Left Bank Canal.*—The total area irrigated under this canal was 3,473 acres and the revenue realised from all sources was Rs. 17,839. The increase in the area is mainly due to want of timely rainfall during both the seasons. The extension of the canal was in progress and the outlay incurred on it during the year was Rs. 11,877.

* See photograph.

182. The project comprises the following works:— Nira Right Bank Canal.

1. Building a new dam at Bhatghar.
2. Constructing a canal on the right bank from Vir up to Piliv for a length of about 88 miles.

183. *Bhatghar Dam.*—The excavation for the foundation of the new dam and the waste weir was in progress and has been completed except in a total length of about 1,350 out of 4,400 feet. The total quantity of masonry laid during the year was 1·57 million cubic feet, which is considered to be fair progress considering the difficulties met with, *viz.*, continuous and very late rains till the end of November 1917, which filled up the quarries and prevented carriage and burning of lime, and the appearance of plague on the works. The total quantity of the work carried out up to end of March 1918 was about 38 lakhs of cubic feet or about 19 per cent. of the total estimated masonry in the dam. The dam will probably be completed in the year 1928.

184. The construction of the Gunjawani bridge was started in February 1917 and the masonry of all the piers and abutments was completed during the year. The arch work, approach roads, etc., are in progress.

185. The expenditure on the masonry in the dam and other works during the year was Rs. 6,34,152, the total outlay on works only upto 31st March 1918 being 35·5 lakhs or about 35 per cent. of the estimated cost as per revised project now prepared by the Executive Engineer, Lake Whiting District.

186. In almost all miles excavation work is practically completed except in 3 miles where the cutting is very deep and in very hard rock.

187. The embankment work in about 85 miles is very nearly completed except the nala gaps left for masonry works which will be filled up as soon as the masonry works are completed.

188. Eighteen culverts and 4 road-bridges have already been completed and 16 aqueducts,* 40 culverts and 18 road bridges are under construction out of the total number, *viz.*, 20 aqueducts, 88 culverts and 38 road-bridges. The masonry works under D-Regulators are not yet taken in hand. A number of permanent buildings have already been constructed and a few are under construction.

189. The expenditure during the year on the works, which were in progress, was Rs. 6,71,105, the total expenditure upto 31st March 1918 being 66½ lakhs or about 46 per cent. of the estimated cost for works only as per revised project now under preparation.

190. During the year under report an Executive Engineer was placed by Government on Special Duty under the Deccan Irrigation Division, for carrying out certain investigations, surveys, etc., as detailed below :—

(*a*) The preliminary investigations and preparation of the detailed plans and estimates for a storage on the Nira River at Natambi or at some other place further down stream between Natambi and Bhor. The investigation of the possibility of constructing a reservoir on the Gunjawani.

(*b*) The preparation of the projects for the extension of the Nira Right Bank Canal from mile 89 to 109 and remodelling the Nira Left Bank Canal from mile 0 to 101.

and

(*c*) The preparation of a report as to the general policy that will be followed in the future in regard to the irrigation development of the Nira Valley as a whole and particularly of the part beyond miles 89 and 42 of the Right and Left Bank Canals respectively.

191. *Work done during the year.*—The Special Duty District was opened in December 1917. After a thorough investigation of the Nira Valley between Natambi and Bhor it was found that the site chosen at Natambi in 1902 was the best obtainable.

192. In 1902 several trial pits were taken and several deep bores made with a percussive drill on the dam line at this site. In finally investigating this site trial bores were taken by means of a Calyx Drill, so that the information gained might be quite reliable.

193. In the Gunjawani valley it was found after a careful examination that a better site than that selected in 1902 was not available for a Storage Reservoir. As the cost of a dam at this site would be prohibitive it was considered inadvisable to proceed further in the matter.

194. The estimates for the extension work on the Nira Right Bank Canal and for the work of remodelling the Nira Left Bank Canal were taken in hand and are well advanced.

(ii) Second Class Irrigation Works.

195. The outlay on repairs, extensions and improvements to the bandharas and small village channels during the year was Rs. 24,452 as against Rs. 28,328 for the previous year.

* See photograph.

4.—SOUTHERN DIVISION.

(i) First Class Irrigation Works.

196. The first class works in the Southern Division irrigated over 27,000 acres and earned a gross assessed revenue of about Rs. 1,74,000. This shows an increase of 3·4 per cent. in the area irrigated and of 12 per cent. in revenue when compared with the averages of the previous three years and is due to more demand for water on account of unseasonable rainfall during the year and also to the increase in the perennial irrigation.

Krishna Canal.

197. The Krishna Canal is the only major work in this division. It is 36 miles long and takes off from the left bank of the Krishna river from a weir built near the village of Khodsi, Taluka Karad, Satara District.

198. The improvements to the weir sanctioned in 1916 with a view to increase its capacity of storage have been postponed owing to the abnormal increase in the price of iron, etc., required for the work. The expenditure already incurred on this work amounts to Rs. 59,100 against the estimated cost of Rs. 85,226.

199. During the year silt was removed from the first 10 miles of the Krishna Canal at a cost of Rs. 2,656. The work of repairing the damages caused by the heavy rain is in progress.

Gokak Canal.

200. The most important of the first class minor works in this division is the Gokak Canal. This irrigation system consists of a masonry weir across the Ghataprabha river at Dhupdal in the Belgaum District and a short length of canal taking off from the reservoir formed by the weir.

201. The weir crest (2,985 feet in length) was temporarily raised as usual 2 feet at a cost of Rs. 1,755 with a view to increase the storage of water for rabi irrigation and to meet the demands of the mills at Gokak. The additional storage of 256 millions cubic feet of water thus obtained was found to be very useful for rabi and perennial irrigation.

202. In the year under report the supply of water in the reservoir being sufficient for the authorised daily discharge, the mills at Gokak were supplied with water at the usual rate of 146 cusecs per day (of 13 hours) throughout the year, except on Sundays.

203. Arrangement was also made to supply the pumping engine of the Madras and Southern Maratha Railway Company with water, for which the company pays at the rate of one anna per engine watered subject to a minimum of Rs. 25 per month.

204. On the evening of 2nd June 1917, the water in the Dhupdal reservoir reached its lowest level standing at 17·56 feet above the sill of the sluices. The tank began to fill from 3rd June 1917 till it overflowed on the 23rd June and reached a maximum flood height on the 27th July 1917, when the water reached a level of 2·14 feet above the permanent crest of the weir.

Revari and Chikhli Canals.

205. The only two works taking off direct from rivers without storage are the Revari and Chikhli Canals in the Satara District irrigating about 1,000 acres. The Revari Canal is about 6 miles in length and takes off from above an ancient bandhara situated on the river Vasna in Koregaon taluka.

206. The Chikhli Canal is a small irrigation channel only 6½ miles in length, which has its origin from a weir built in the Nandni river in the Khanapur taluka.

207. The Revari Canal yielded in the year under report a gross revenue of Rs. 5,000 and the Chikhli Canal Rs. 2,600.

Dharma Canal.

208. The improvements to the Dharma Canal, consisting mainly of (1) providing a new head regulator to admit sufficient supply to the canal and to control floods, (2) providing escapes and aqueducts at suitable places in the first 10 miles of the canal, (3) putting the tail portion of the canal in good order and (4) constructing suitable cross drainage works, which were commenced in 1910, were in progress during the year. The total expenditure on these improvements to the end of the year under report was Rs. 90,762 against the estimated cost of Rs. 95,582 (direct charges).

Yerla River Irrigation Works.

209. Of the canals furnished with storage works, the three most important are in the Satara District. The first of them known as the Yerla River Irrigation Works consists of the Nehr tank having a canal 8¼ miles in length starting from the right bank of the river Yerla at the Nehr tank and two other canals, *viz.*, the Yerla Right Bank, 15½ miles in length, and the Yerla Left Bank, 8½ miles long, starting from a pick-up weir across the Yerla river at Khatgun.

210. The Yerla River Irrigation Works irrigated an area of 3,000 acres of land and yielded a gross revenue of Rs. 16,500.

Maini Tank.

211. The Maini tank is the second system. The Maini tank canal derives its water-supply from a large nalla that falls into the river Yerla in the southern portion of Khatao Taluka. The canal is 9½ miles in length and irrigates lands in both Khatao and Khanapur Talukas. It irrigated about 1,800 acres of land and yielded a gross revenue of Rs. 8,700.

Upper Man River Works.

212. The Upper Man River Works is the third system referred to and consists of a tank at Pingli which supplies the right bank canal, 4 miles in length, and also a distributary on the left side, *viz.*, the Dehewadi canal, 3½ miles in length. Both of these tail into the

Gondavla canal (7 miles in length) which has an independent origin at a weir across the Man river. Lower down the river the Lodhavada canal (3½ miles) has its source. This system irrigated an area of about 850 acres of land and yielded a gross revenue of Rs. 4,400.

213. The remaining works are all small tanks mostly in the Dharwar District irrigating from 50 to 600 acres each. Other works.

(ii) Second Class Irrigation Works.

214. Most of the Second Class Irrigation works are in the Dharwar District and on them depends the success of the important rice cultivation in the hills. During the year repairs to 59 tanks were carried out and the expenditure on them amounted to Rs. 41,000 against Rs. 42,000, the average of the previous three years. The total area irrigated by these works was 89,164 acres.

5.—SCIENTIFIC WORKS.

(a) Engineering Questions that have arisen.

215. Observations to ascertain the loss by evaporation and absorption were made by means of iron tanks placed in the Mukti Tank in the West Khandesh, the Mhaswa and Hartala Tanks in the East Khandesh, the Bhatodi Tank in the Ahmednagar, and the Ekruk, Ashti and Pathri Tanks in the Sholapur District. The results are being recorded and when sufficient data are collected they will furnish useful information for the preparation of projects for tanks to be constructed under similar conditions.

216. The experimental device for locking pipe outlets is still under trial on the Bhatodi Tank in the Ahmednagar District. It is found to be working satisfactorily but requires to be kept longer under observation to see if its use can be extended.

(b) Special Irrigation District.

217. During the year under report a small area of sugarcane, fodder and vegetables was irrigated near the Septic Tanks with the effluent, water from the Mutha Right Bank Canal being pumped for sugarcane only. Septic Tanks, Hadapsar, Poona.

218. The total area thus irrigated was 60 acres and the expenditure on pumping canal water was Rs. 1,324, the total assessment (Kharif and Rabi) being Rs. 5,049. The cost of canal water pumped was Rs. 1,058.

219. The work of remodelling Distributary No. 5 of the Mutha Right Bank Canal was commenced during the year and is in progress, the expenditure incurred on the work being Rs. 2,963. Remodelling Distributary No. 5. Mutha Right Bank Canal.

220. An experimental farm on Distributary No. 5 was started during the year and some 8 acres of cane have been planted. The expenditure incurred on starting and maintaining the farm was Rs. 895. Experimental farm.

221. Owing to serious leaks in the cast iron pipes laid from the septic tanks to the distributary the supply of effluent was very uncertain and it was therefore decided not to give effluent to the crops under this distributary.

222. *Contouring.*—The area in 3 villages commanded by the Nira Left Bank Canal between Haturna and Vadapuri nalas was contoured during the year. Nira Left Bank Canal.

223. *Nala Surveys.*—In order to study the sub-soil conditions, sub-soil and nala surveys were begun and detailed preliminary surveys were carried out in 6 villages.

224. The greatest advance made this year has been the introduction of an indirect method of measuring the permeability of sub-soils. This is done by observing the recuperation co-efficients of bore holes. The drains as laid out follow the line of high co-efficients. So far as is known this method of tackling the problem has never been tried before. It is yet too soon to say that it is a complete success but as it largely eliminates questions of types of soil and physical state it greatly simplifies work.

225. Recuperation tests not only indicate the best line but also the best depths at which to locate drains.

226. *Nala clearance in salt affected land.*—The experimental work of reclaiming the salt affected area near Baramati was continued during the year. This consisted of extending the existing trenches and excavating new ones to drain off the sub-soil water and flooding certain areas to wash out salts.

227. The effect of flooding the land is not definitely known as the analyses of the soil have not yet been received, but there seems to be a marked improvement in the land as crops have been planted in the areas in question.

228. The area outside the experimental area which has been improved is over 50 acres. It will take couple of years before the physical texture is improved and full improvement will not be attained for several years. This is because the land has been steadily deteriorating for over 20 years.

229. Surface classification of about 14,500 acres in 16 villages of the Godavari Right Bank Canal was carried out during the year and sub-soil classification is in progress. Godavari Canals.

(c) River Gauging.

230. The gauging of the 39 rivers, inclusive of the six new gauges transferred to the Deccan Irrigation Division in 1916, was continued during the year under report.

231. A training class was held as usual in Poona, where practical instructions were given to the old and new gauge karkuns before they commenced the annual gauging operations on their respective gauges. This combined with the frequent surprise visits, the systematic and timely inspections of and repairs to the gauges, etc., gave fairly satisfactory results, for publication in the "Annual Report of the supplies of water available for Irrigation Works, etc."

232. In the tabulation of the observed discharges for the year instead of the constant 0·85 invariably in use in previous years, suitable co-efficients for different water levels, as given on page 56 of Higham's Tables were used.

233. During the year under review, silt experiments were made during floods, to ascertain the percentage of silt contained in the water of some of the rivers in the Deccan Irrigation Division.

234. The several rain-gauges in the Belgaum and Satara Districts were maintained during the year by the respective Executive Engineers.

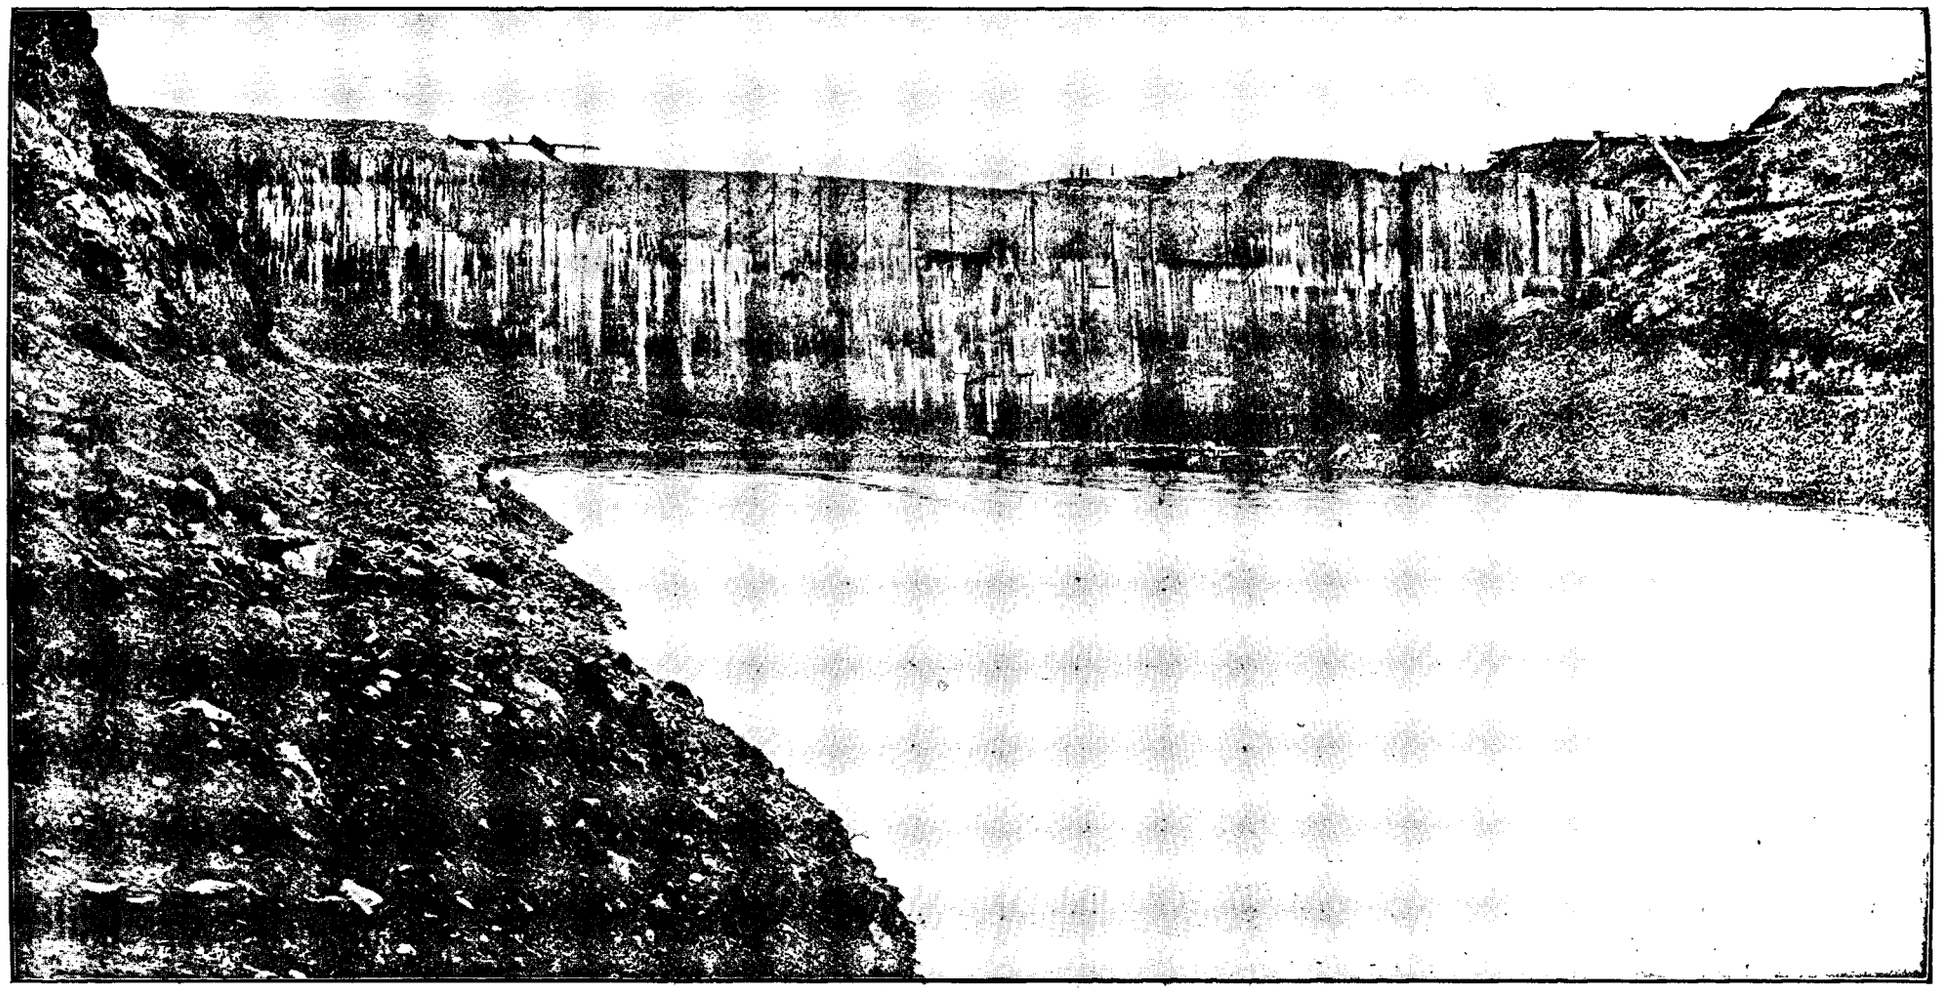
(d) Experiments on the efficiency of canals.

235. Another annual publication gives a record of observations for the flow and losses in canal, the quantity of water used for irrigation and the loss from tanks.

236. Occasional notes are written upon the saturation of earthern dams and the rate of deposit of silt in tank basins for which observations are being made continuously.

6.—PHOTOGRAPHS.

237. The following are some photographs of irrigation works referred to.



Lake Arthur Hill Dam.

* This area is also commanded by the Nira Left Bank Canal.
† As revised by the Executive Engineer, Pravra Canals District. The Godavari project is complete, hence the area irrigable at present is the same as projected.
‡ As revised by the Executive Engineer, Malsiras District, in accordance with revised table of contents.
(§) Estimated rainfall in the catchment.
(a) Figures given in Statement I-A.
(b) The tank supplies the Girna Left Bank Canal and bandharas there below.
(c) Above lowest foundation.
(d) Above lowest point in river bed.
(e) The tank supplies the Pálkhed, Ojhar Támbat, and Wadáli Canals and their distributaries as noted in Statement I-A.
(f) Includes 38½ miles of Branch Canal.
(g) Storage available after deducting 508 m. cft. which cannot be used on account of the Poona water-supply.
(h) Includes 7,133 commanded by Matoba Tank.
(i) After deducting silt deposits.
(j) Corrected as it was on error. At provisional F. S. L. R. L. 103·50.
(k) At original F. S. L. R. L. 105·00.
(l) Corrected at is was an error,
(m) The revised figure has been approved in G. M. No. I.-9046, dated 14th August 1915, and adopted in the statement printed with G. O. No. W. I.—8323, dated 23rd August 1918.
(n) The contents at present after deducting silt are 75·82 m. cft.
(o) Gauged at the respective stations.
(p) Assumed.
(q) Ganged in the catchment area.
(r) The catchment area of the drainage channel is 13 square miles in addition.

II-A.

(a) Excluding Irrigation Share of Land Revenue.
(b) Correct balances as now reported by the Revenue Officers in Canal Returns Nos. VI and VII.
(c) Inclusive of assessments shown in Canal Return No. IX.
(d) Excess recovery to be refunded.

C. W. C. CARSON,
Accountant General, Bombay.

STATEMENT IV-C.

Statement showing the Financial Results of Irrigation Works in Deccan and Gujarát for the year ended 1917-1918, based on the assessment of the year.

Principal Results and Operations for the year ended 31st March 1918.

	Irrigation Works.	Capital outlay (direct and indirect) to end of year.	Revenue assessed during the year.								Working Expenses, direct and indirect.	Net assessed Revenue of the year.	Percentage on Capital outlay to end of year.
			Direct assessed Revenue.						Indirect Revenue (Land Revenue due to operation of Canal).	Grand Total.			
			Occupier's rate.	Owner's rate.	Plantations.	Water-power.	Navigation.	Miscellaneous.	Total.

I-E.

Bombay Presidency, excluding Sind, for the year 1917-1918.

Area irrigated per Cubic Foot per Second.				Base to which the Duties of Water are calculated.		Remarks.
Discharged at Head.		Utilized.				
Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	
14	15	16	17	18	19	20
(a) 23·70	(a) 75·00	(a) 42·22	(a) 103·62	16th June to 15th October	16th October to 15th February	* In the rabi season in addition to pure rabi crops perennial and eight months crops are irrigated. To obtain correct duties therefore these crops have to be added to the rabi area in column 4. The antique figures shown in brackets, represent the areas actually irrigated in the rabi season and the duties for the rabi season have been calculated on these figures.
54·71	54·47	54·71	54·47			
...	...	...	...			
54·55	107·66	(b) 64·79	125·24	16th February to 15th October.	16th October to 15th February.

86·00	74·00	95·00	89·00			
132·00	73·60	132·00	73·00			
81·53	83·51	81·53	83·51			† Hot weather discharges of these canals and tanks have not been included as they are generally very small in this season. If they were shown, the duties would have to be calculated to a basis of eight months which would give greatly vitiated figures. Even during the monsoon and rabi seasons, in the case of tanks there is no discharge from them for days together.
...	...	...	...

...	...	...	...			
52·91	66·78	52·91	66·78	16th June to 15th October...	16th October to 15th February.	‡ The antique figures in brackets represent areas actually irrigated during the respective seasons. They differ from the figures shown in statement IV-E owing to thefact that certain areas irrigated during rabi season were assessed in kharif papers and vice versa. The figures in IV-E represent areas assessed in the respective seasons. In case of Nira Canal, Mutha Canals and Shetphal Tank, the low duties are due to high proportion of sugarcane which requires thrice as much water as is required for ordinary seasonal crops.
(d) 128·46	(d) 116·69	(d) 128·46	(d) 116·69			
58·01	71·49	58·01	71·49			
(c) 41·79	(c) 42·78	(c) 49·16	(c) 52·20			
60·00	63·00	...¶	...			
(d) 334·00	(d) 289·00	(d) 334·00	(d) 289·00	16th February to 15th October.	16th October to 15th February.

190	16	190	16			
...	...	...	...			*Note applicable to the Central Division.* As the perennial and eight months' crops are irrigated during the rabi season, in order to obtain the figures of duty for the rabi season in columns 15 and 17 the areas of perennial and eight months' crops given in statement G, irrigated in the rabi season are added to the area of rabi in column 4 and the totals so obtained are divided by the figures of rabi discharge in columns 11 and 13. The figures in columns 15 and 17 thus represent areas actually irrigated per cusec.
...	...	...	...			§ Area under consolidated assessment.

$ Excludes 28 acres indirectly irrigated by underground percolation and the revenue of Rs. 52 realized therefrom.

† The large figures are explained by the fact that the working expenses include those for the Poona Water Supply, which is a part of the Mutha Canals project.

§ The high rate is due to high proportion of sugarcane, which is very high rated crop on this canal.

Area on which consolidated assessment is levied	...	...	...	...	...	...	...	...

* This area represents the area in the basin of Lake Beale let out for cultivation and measured as per G. R. No. 7200 of 9th August 1912, a uniform rate of Rs. 2 per acre was levied. The areas were not measured distinctly for each crop. Hence areas cannot be classified in respect of different crops and consequently no valuation of crops can be made.

			(g) { * 26 † 13 }	7 0 0	2 0 0	5 0 0	6 0 0	.....	2 0 0				(m) Rates sanctioned until further orders, *vide* Government Resolution No. 156A.I.—1112, dated 12th July 1894.
12	Pravara River Works—Lakh Canal (h)	...	8	4 0 0	0 8 0	2 0 0	4 0 0	.....	.....				(f) In force for 5 years ending 31st March 1921, *vide* Government Resolution No. A.I.—7053, dated 7th July 1916.
	Mutha Canals and Matoba Tank (z) Sugarcane under the Mutha Canal within the Poona City and Suburban Municipality and Cantonment limits or within one mile of those limits.		50										(g) Rates for leased areas to be in force till 15th February 1918 on which date the leases will expire, *vide* Government Resolution No. A.I.—4194, dated 7th April 1914.
13	Sugarcane on all remaining land commanded by both the canals.	...	40 ‡45	8 0 0 ‡12 0 0	3 0 0	5 0 0	7 0 0	.....	1 0 0 *2 0 0				(i) For the whole year. (ii) For crops irrigated by canal water during the monsoon and rabi seasons and by wells during the hot weather.
	Sugarcane under the Matoba Tank.		30 ‡45										(y) Rates for areas outside leased areas to be in force for 5 years ending 15th June 1919, and these rates will also apply to the leased areas on expiry of the present leases till 15th June 1919.
	Pán gardens		30 ‡45										(h) Sanctioned in Government Resolution No. A.I.—5237, dated 7th May 1914, and will be in force till 31st March 1918 unless water from Lake Arthur Hill is available before then.
	Perennial crops other than Sugarcane and Pan gardens.		15 ‡22½										(z) Rates sanctioned for 10 years from 16th February 1911 to 15th February 1921, *vide* Government Resolution No. A.I.—2213, dated 15th October 1910. The sanctioned rates were, however, revised with effect from 15th February 1918, *vide* Government Resolution No. A.I.—6371, dated 27th June 1917.
14	Ekrúk Tank (x) § ...	...	15	8 0 0	3 0 0	5 0 0	7 0 0	.....	1 0 0				(x) In force till 15th February 1919, *vide* Government Orders No. A.I.—2415, dated 20th February 1918 and No. A.I.—6109, dated 19th June 1917.
15	Krishna Canal (n) ...	...	15† 30*	8 0 0	3 0 0	5 0 0	7 0 0	.....	1 0 0 *2 0 0				(n) Sanctioned for a term of 10 years or up to 15th June 1920, *vide* Government Resolution No. A. I.—2395, dated 14th November 1910.
	MINOR WORKS AND NAVIGATION.												(o) Rates sanctioned in Government Resolution No. A.I.—1939, dated 6th September 1910, are continued up to 15th June 1920, *vide* Government Order No. A.I.—9000, dated 14th September 1917.
16	Wangroli Tank (o) ...	...	...	6 8 0	2 8 0	4 0 0	6 0 0	For rice 4 0 0	1 8 0				(p) Rates sanctioned in Government Resolution No. A.I.—1128, dated 13th May 1910 are continued up to 31st July 1920, *vide* Government Resolution No. A. I.—10155, dated 14th September 1915.
17	Tranza-Nagramma Tanks(p)	...	...	6 0 0	2 0 0	4 0 0	6 0 0	For rice 4 0 0	1 0 0				(q) Rates sanctioned in Government Resolution No. A.I.—1335, dated 14th June 1910 are continued up to 15th June 1920, *vide* Government Resolution No. A. I.—287, dated 10th January 1916.
18	Savali Tank (q)	...	...	8 0 0	4 0 0	4 0 0	6 0 0	.....	1 0 0				

Note—(1) For lift irrigation half the ordinary rates are charged.
(2) Double the ordinary rates are charged as penal rates for taking water without permission.
(3) Leakage or percolation rates are the same as ordinary rates.
(4) Water rate for non-irrigational purposes should not be less than Re 1 per 10,000 cubic feet, *vide* Government Resolutions No. A.I.—879, dated 28th January 1913 and No. A.I.-7604, dated 21st July 1916.
(5) Rs. 2 per acre to be charged for single watering given to those who are not regular irrigators or holders of rabi-leases *vide* Government Resolution No. A.I.—1759, dated 5 July 1916 and Government Order No. A.I.—2525, dated 3rd March 1916.

§ For Sugarcane and Pán gardens double the ordinary rates are charged.

(G) For ordinary Rabi. (H) For restorative crops grown after rabi. (K) In either Kharif or rabi season.
21	Hartála Tank (*i*)‡ ...	...	8 0	4 0 0	2 0 0	2 0	4 0	.....	1 0 0 †2 0 0				†† The tank is to be managed specially for Kharif and rabi irrigation, but if water is supplied for sugarcane and perennial crops in the Kharif and Rabi seasons double the ordinary rates *viz.* Rs. 4 and 6 per acre respectively will be charged.
22	Mhasva Tank (*i*)‡ ...	...	8 0	4 0 0	2 0 0	2 0	4 0	.....	1 0 0 †2 0 0				(*i*) Sanctioned for a period of 3 years ending 31st March 1919, *vide* Government Resolution No. A.I.—5180, dated 19th May 1916.
23	Jámda Canals (*i*)‡ ...	...	10 0	5 0 0	2 0 0	3 0	5 0	.....	1 0 0 †2 0 0				‡ Sugarcane and pan gardens to be charged double the seasonal rates except that the perennial rates for these crops should be Rs. 12 on Hartala and Mhaswa tanks and Rs. 16 for Jamda canals.
24	Parsul Tank (*j*) ...	...	...	7 0 0	2 0 0	5 0	8 0	.....	1 0 0				(*j*) Rates sanctioned in Government Resolution No. A.I.—1754, dated 10th August 1910, up to 14th June 1921. Water is not to be reserved for perennial Irrigation.
25	Pravara River Works—Pravara Left Bank Canal. (*k*)	...	...	5 0 0	2 0 0	3 0	4 0	.....	1 0 0				(*k*) Sanctioned in Government Resolutions No. A.I.—1460, dated 9th June 1909, and No. A.I.—2051, dated 24th August 1909. In force until an improved supply is provided by the storage work of the Pravara River project.
26	Bhátodi Tank(*l*) ...	...	(i) 14 8	6 8 0	2 8 0	4 0	8 0	.....	1 0 0				(*l*) In force till 15th October 1920, *vide* Government Resolution No. A.I.—13135, dated 28th November 1914. Half the usual rates are charged for irrigation from water flowing down the waste-weir of this tank *vide* Government Order No. A.I.—10592, dated 2nd November 1917.
27	Kásurdi do. § (*d*) ...	...	...	6 8 0	2 8 0	4 0	6 0	.....	1 0 0 †2 0 0				(i) For the whole year.
28	Shirsuphal do. § (*d*) ...	...	...	6 8 0	2 8 0	4 0	6 0	.....	1 0 0 †2 0 0				(*d*) Rates sanctioned for 10 years from 16th February 1911 to 15th February 1921, *vide* Government Resolution No. A. I.—2215, dated 15th October 1910.
29	Bhádalvádi do. §(*d*) ...	...	...	6 8 0	2 8 0	4 0	6 0	.....	1 0 0 †2 0 0				† For Sugarcane and Pan gardens.
30	Koregaon do. §(*e*) ...	...	13 0	7 0 0	3 0 0	4 0	6 0	.....	1 0 0				(*e*) In force till 15th February1919, *vide* Government Resolutions No.A.I.—2415, dated 29th February 1916, and No. A.I.—6109, dated 19th June 1917.
31	Ashti do. §(*e*) ...	...	13 0	7 0 0	3 0 0	4 0	6 0	.....	1 0 0				
32	Páthri do. §(*e*) ...	...	13 0	7 0 0	3 0 0	4 0	6 0	.....	1 0 0				
33	Revári Canal (*s*) ...	...	*12 0 †24 0	6 0 0	2 0 0	4 0	6 0	.....	1 0 0 †2 0 0				(*s*) Sanctioned for a term of 10 years or up to 15th June 1920, *vide* Government Resolution No. A.I.—2395 of 14th November 1910.
34	Upper Man River Works (*s*)	...	*12 0 †24 0	6 0 0	2 0 0	4 0	6 0	.....	1 0 0 †2 0 0	Nil.	Nil.	Nil.	* For Perennial crops other than Sugarcane and Pan gardens.
35	Yerla River Irrigation Works (*s*)	...	*12 0 †24 0	6 0 0	2 0 0	4 0	6 0	.....	1 0 0 †2 0 0				(*t*) In force from 1st October 1913 as per Government Resolution No.A.I.—3685, dated 27th March 1914, for a term of 5 years. Water is allowed free of charge for non-perennial crops for the same period.
36	Chikhli Canal (*s*) ...	...	*12 0 †24 0	6 0	2 0 0	4 0	6 0	.....	1 0 0 †2 0 0				(*u*) Sanctioned for a period of 5 years from 1st April 1915 to 31st March 1920, *vide* Government Resolution No. A.I.—6068 of 26th May 1915.
37	Maini Tank (*s*) ...	...	*12 0 †24 0	6 0 0	2 0 0	4 0	6 0	.....	1 0 0 †2 0 0				(i) For the whole year.
38	Muchkundi Tank (*t*) ...	...	8 0	4 0 0	.....	...	...	.....	.....				(ii) For sugarcane irrigated between 15th June and 14th February.
39	Gadikeri do ...	...	...	.....	.....	...	...	.....	.....				
40	Gokak Canal, 1st Section, and Storage Works (*u*)	...	(i) 22 0 (ii)16 0	8 0 0	3 0 0	5 0	15 0	.....	1 0 0				(*v*) Sanctioned for a period of 5 years from 1st April 1915 to 31st March 1920, *vide* Government Resolution No. A.I.—5425 of 8th May 1915.
41	Dambal Tank(*v*) ...	...	¶14 0	*a*5 0 0 *b*7 0 0	*e* 3 8 0	*c* 3 8 *d* 4 0	*f* 6 0	.....	*e* 1 0 0 *g* 2 0 0				¶ For Sugarcane, Betal-leaf, Cocoanut trees, &c., &c.
42	Medleri do.(*v*) ...	...	¶14 0	*a*5 0 0 *b*7 0 0	*e* 3 8 0	*c* 3 8 *d* 4 0	*f* 6 0	.....	*e* 1 0 0 *g* 2 0 0				*a* From 15th June to 15th February.
43	Madag do.(*v*) ...	...	¶10 0	*a*5 0 0 *b*7 0 0	*e* 3 8 0	*c* 3 8 *d* 4 0	*f* 6 0	.....	*e* 1 0 0 *g* 2 0 0				*b* „ 15th October to 15th June or 1st August to 31st March. *e* „ 15th June to 15th October or 15th July to 30th November. *d* „ 15th October to 15th February. *e* „ 15th June to 15th October. *g* „ 16th October to 14th June. *f* „ 15th February to 15th June.
44	Asundi do.(*v*) ...	...	¶14 0	*a*5 0 0 *b*7 0 0	*e* 3 8 0	*c* 3 8 *d* 4 0	*f* 6 0	.....	*e* 1 0 0 *g* 2 0 0				
45	Mávinkop do. ...	...	...	.....	.....	...	...	.....	.....				
46	Dharma Canal (*w*) ...	...	14 0	*a*5 0 0 *b*7 0 0	*e* 3 8 0	*c* 3 8 *d* 4 0	*f* 6 0	.....	*e* 1 0 0 *g* 2 0 0				*w* Rates sanctioned for 5 years, in Government Resolution No. A.I.—3962 of 10th April 1913, were to continue till 31st March 1918, *vide* Government Order No. A.I.—7353, dated 25th July 1917.

Note—(1) For lift irrigation half the ordinary rates are charged.
(2) Double the ordinary rates are charged as penal rates for taking water without permission.
(3) Leakage or percolation rates are the same as ordinary rates.
(4) Water rate for non-irrigational purposes should not be less than Re. 1 per 10,000 cubic feet, *vide* Government Resolutions No. A. I.—879, dated 28th January 1913, and No. A.I.—7694, dated 21st July 1916.
(5) Rs. 2 per acre to be charged for single watering given to those who are not regular irrigators or holders of rabi leases *vide* Government Resolution No. A.I.—1759, dated 5th July 1906, and Government Order No. A.I.—2525, dated 3rd March 1916.

§ For Sugarcane and Pán gardens double the ordinary rates are charged.
